

CLARUS[®]

LEVITAN

Malleable stylet can be shaped to fit your patient's difficult airway

When a patient presents with significant trauma, C-spine or a small mouth opening, you'll want a familiar tool that works just as well in those difficult airways as it does in a routine intubation.

- Navigate the ET tube into the trachea with fiberoptic visualization
- High first pass success rate with a proven track record in the emergency and difficult airway scenario
- Robustly designed to last for years
- Works in conjunction with many LMA's
- Portable and reusable device that won't strain your budget

Compatible with Clarus Turbo LED or most Greenline laryngoscope handles

MRI Safe

SUPERIOR DESIGN, SUPERIOR ACCESS

CLARUS LEVITAN

30000-GLS

The Clarus Levitan fiberoptic stylet is the ideal solution for emergency intubation. Optimum grade fiberoptics and a high-resolution eyepiece provide superior access and vision when you need it most. Fast, portable and cost-effective, the Levitan is the trusted choice for thousands of emergency doctors worldwide.

- 1 High resolution eyepiece for conclusive placements
 - 2 Port for oxygen insufflation
 - 3 Malleable stylet gives superior laryngeal access
 - 4 Atraumatic tip protects sensitive airways and reduces trauma
 - 5 Soakable stylet and light source allow for safe and efficient sterilization
- Designed by emergency physicians, for emergency physicians
